**Coding Key for Database  
"Strikes in Argentina, 1984-1993"**

March 17, 1997

Coding key revised and reorganized December, 2002

## **Introduction**

All data in the fourteen-column database entitled "Strikes in Argentina, 1984-1993" were transcribed, extracted, or interpolated from data collected in Buenos Aires by the Consejo Técnico de Inversiones, which published its strike records weekly in a newsletter called Tendencias Económicas and annually in a report called La Economía Argentina. Data on cause and small versus big scope (see below for definitions), which are available only for the January 1984 to May 1989 period, were collected from Informes Laborales, published monthly by the Buenos Aires labor studies center Documentación e Información Laboral (DIL) until the center closed in mid-1989. The database was constructed using Microsoft Excel for the Macintosh (originally in version 2.2, now translated into version 4.0), and may be accessed through this program or any higher-numbered version of Microsoft Excel for the Macintosh.

This coding key describes, for each of the fourteen columns, (1) what sort of information is contained in the column, (2) what source the information came from, and (3) special coding procedures used to fill in the information in each column. More information about the database may be found in the following publications by James W. McGuire:

"Strikes in Argentina: Data Sources and Recent Trends." Latin American Research Review 31 No. 3 (1996), pp. 127-150.

"The Causes of Strikes in Argentina, 1984-1991." Working Paper No. 49, Institute of Industrial Relations, University of California, Berkeley, October 1992.

## **Coding Key**

**What Counts as a Strike:** Only strikes, lockouts, and stoppages. Strikes by police, prison guards, and doctors are included.

**Date.** The month in which the strike took place. 84.01 means January 1984, 84.02 means February 1984, etc. The figure in "Date" represents the month under which the strike was recorded in the successive annual issues of Consejo Técnico de Inversiones, La Economía Argentina.

**Indus.** The industry or service in which the strike took place. The 81 industries to which each of the four-letter codes (eg. ALIM for Alimentación -- food packaging) correspond are listed below under Coding Key 1: Industry. McGuire assigned each strike to a given industry on the basis of the information given in La Economía Argentina and (for the January 1984 to May 1989 period) Informes Laborales, filtered through his general knowledge of the structure of the Argentine economy and labor movement. In 33 cases where this knowledge failed him, the industry was coded DESC for Desconocido -- unknown.

**Pub/Pr.** The sector in which the strike took place: public (PUBL), private (PRIV), mixed public-private (MIXD), or unknown (DESC). McGuire decided which industries or services belonged the public, private, or mixed sector (see Coding Key 1: Industry, below). The 33 strikes falling under the industry code DESC were left as DESC, but were probably all in the private sector.

**Sector.** A more detailed breakdown of the sector in which the strike took place. See Coding Key 2: Sector, below.

**Size.** Each strike was coded either "Small" or "Big." One reason the database was constructed was to test quantitatively the hypothesis that strike decisions are motivated differently at the level of the national union leadership (where political considerations and factional infighting were hypothesized to be important motivations for strikes) than at the level of plant-level leaders (where bread-and-butter-issues like wages and job security were hypothesized to be the key motivations for strikes). For the purposes of testing this hypothesis, what was of interest was the conditions under which union leaders decide to call a strike, not how many workers the union leaders bring with them after making that decision. From this standpoint, "scope" (plant, enterprise, municipality, province, industry) is a more valid measure of bigness than was "partic" or "strkr," which measure the number of workers involved in the strike. With a few exceptions (see Coding Key ), strikes called by national union leaders, whether of the metalworkers' union (267,000 members) or dock workers' union (5,000 members), were coded "big," and all other strikes were coded "small." The raw information on the basis of which "size" was recorded comes from the "scope" column. Two classes of PROV strikes were coded big: those bigger than 7,000 by Tucuman sugar workers, and those by the Rio Negro fruit packers (these industries are heavily concentrated in a single province and the provincial union is affiliated to no higher sectoral union). For more information on which sort of strikes got coded "small" and which sort got coded "big," see Coding Key 3: Strike Size, below.

**Scope.** Strikes were coded according to whether they took place at the level of plant, multi-plant enterprise, municipality, province, industry, etc. The database called "Data/Coding Key Scope" describes in detail the twelve possible values for this variable. The author decided which scope was appropriate for each strike on the basis of the information given in La Economía Argentina and Informes Laborales, filtered through his general knowledge of the structure of the Argentine economy and labor movement. In cases of ambiguity between city and province (e.g. "Sanidad Tucumán"), the strike was coded as PROV, except for strikes by municipal workers, which were coded MUNI. See Coding Key 4: Strike Scope, below.

**Prov.** What province the strike took place in. The four-letter code corresponds to the first four letters of the name of the province in which the strike took place, or the first two letters of each word for provinces like Santa Cruz (SACR) whose names are made up of two words. CAPI means capital, GRAN means Greater Buenos Aires, NACI means throughout the country, CONF means the strike was launched by a confederation of unions in various provinces. The author decided which province was appropriate for each strike on the basis of the information given in La Economía Argentina and Informes Laborales, filtered through his general knowledge of Argentine geography and the structure of the Argentine economy and labor movement. Where this knowledge failed him, this category was left blank. If La Economía Argentina said "Buenos Aires," the strike was coded BUEN, except when other evidence indicated that "Buenos Aires" should be coded as CAPI or GRAN. See Coding Key 5: Strike Province, below

**Cause1.** The main stated cause of the strike as described in Informes Laborales (La Economía Argentina gave no information on cause). There were twenty-five categories of cause (see Coding Key 6: Stated Cause, below). For about 1000 strikes the cause could not be determined for one of two reasons: either the strike was listed in La Economía Argentina but not in Informes Laborales (in which case the strike was coded "SINF"), or the strike was listed in both publications, but Informes Laborales provided no information or insufficient information about the cause. The most frequently cited cause was an explicit bid for a pay hike (see Coding Key 6: Stated Cause, Summary Data, below). The next most frequent involved the payment of overdue wages. The overdue wage demand was especially prominent among hard-hit categories of workers: sugar mill workers, meatpackers, teachers, and civil servants in the poorer provinces of the northwest and Patagonia. Strikes against layoffs and plant closings, the third-most important category, were also more common in the hardest-hit economic sectors, where strikes tended to be of unusually long duration (see Coding Key 1: Industry, below). The fourth-most important stated strike cause was the demand for wage parity or proportionality with better-remunerated employees. This demand was simply a disguised demand for a pay hike, and was especially common among public employees where wage scales were well-publicized (employees of the national lottery were scandalously well-paid). The court clerks alone, who demanded wage proportionality with judges, accounted for more than half of all strikes called to achieve wage parity or proportionality.

**Dfns.** Offensive strikes (OF) were regarded as those in which workers go on strike demanding something they don't already have, like higher wages, better benefits, or improved working conditions (with the specific exception of safety issues). Defensive ones (DEF) were viewed as those in which workers are struggling to keep something they already have (their jobs, their limbs, their freedom to organize) or should have (in the specific instance of overdue wages). Strikes were coded "offensive" (OF) or "defensive" on the basis of "Cause1." For a description of which cause got which coding, see Coding Key 6: Stated Cause, Summary Data, below.

**Partic.** The number of strikers who participated in the strike, according to La Economía Argentina. Where no such number was provided, the column was left blank, and the number of strikers was estimated and placed in the "EstPar" column (see EstPar, below, for the estimation method). Strikes by municipal provincial CGTs were excluded (no data on number of participants).

**Dur.** The duration of the strike in days, as provided by La Economía Argentina, which furnished this information for every strike. Working day assumed to be 8 hours; thus a one-hour stoppage is coded as having lasted 0.125 days. However, stoppages recorded as 12 hrs are counted as having lasted 0.5 days, as the "day" in such industry is presumed to consist of 24 hours. Similarly, 24-hour stoppages are coded as 1 day, 36 hours counted as 1.5 days, 48 hours as 2 days, etc. BUT where number of hours is not divisible by 12, duration is nearest 24 hour day plus fraction of incomplete day in remainder. Hence 26 hours was coded as 1.25 days, 30 hours as 1.75 days, 56 hours as 3.0 days, etc.

**Site.** The plant or enterprise in which the strike took place, the sector of labor involved in a strike above the plant or enterprise, etc., as transcribed directly from La Economía Argentina.

**EstPar.** For some strikes La Economía Argentina provided no information on number of strikers ("partic"). In the interest of minimizing information loss, systematic rules were devised to estimate the number of strikers in the 1,007 strikes for which La Economía Argentina did not report such a figure. The estimation method involved searching the database for "most similar strikes." First, a search was made for a strike at the same site (but at a different time) in which the number of participants had been recorded. If such a strike was discovered, its number of participants (or the average of such numbers if more than one was found) became the estimated number of participants for the strike in question. If not, the number of strikers was estimated by averaging the numbers in a set of "most similar strikes" for which such information was available. For example, La Economía Argentina did not indicate the number of workers participating in November 1986, March 1987, and August 1988 strikes by court clerks in the province of Santa Fe, but did report that 1,500 workers participated in an April 1986 strike by court clerks in the province of Mendoza. Because Santa Fe, according to the 1980 census, had just under twice the population of Mendoza, each of the court clerks' strikes in that province was assigned a proportional number of participants (2,900). These estimates were recorded in the column called "EstPar." Data from the "Partic" and "EstPar" columns were combined to compute the aggregate figures for number of strikers and number of working days lost to strikes. The faint of heart are welcome to stick with the data in the "Partic" column. Strikes by provincial CGTs excluded (no data on number of participants).

**Strkrs.** The figure in this column represents the number of strikers regardless of whether that number was recorded by La Economía Argentina (in which case the number in "Strkrs" equals the number in "Partic") or estimated by the author (in which case the number in "strkrs" equals the number in "EstPar"). Strikes by provincial CGTs excluded (no data on number of participants).

**DayLos.** Number of working days lost in the strike. Computed for each strike by multiplying the figure in the "Dur" cell by the figure in the "Strkrs" cell. Strikes by provincial CGTs were excluded (no data on number of participants).

## **Limitations of the Data**

Although this data set on strikes in Argentina from January 1984 to December 1993 is probably one of the most complete and systematic ever compiled, it is not without some problems. The number of strikes is probably undercounted, but offsetting this undercount for certain purposes, the number of participants in strikes seems occasionally to be exaggerated. The duration of strikes is probably recorded fairly accurately, although strikes that begin in one month and end in the next (perhaps 20 to 50 of the 3,401) enter the database not as one long strike but as two shorter ones. There is no evidence, however, that such undercounts, exaggerations, or conflations were any worse in some months than in others, so these sources of error should not bias the results of time-series analyses within the 1984-1993 period. For more on the limitations of the data, see James W. McGuire, "Strikes in Argentina: Data Sources and Recent Trends," Latin American Research Review 31 No. 3 (1996), pp. 127-150.

**Coding Key 5: Strike Province**

Abbreviation	Province
CAPI	Federal Capital
BUEN	Buenos Aires
GRAN	Gran Buenos Aires
CATA	Catamarca
CHAC	Chaco
CHUB	Chubut
CORD	Córdoba
CORR	Corrientes
ENTR	Entre Rios
FORM	Formosa
JUJU	Jujuy
LAPA	La Pampa
LARI	La Rioja
MEND	Mendoza
MISI	Misiones
NACI	Nacional
NEUQ	Neuquén
RION	Rio Negro
SACR	Santa Cruz
SAES	Santiago del Estero
SAFE	Santa Fe
SAJU	San Juan
SALT	Salta
SALU	San Luis
TIER	Tierra del Fuego
TUCU	Tucuman

### Coding Key 6: Stated Cause

#### The Stated Causes of Argentine Strikes, January 1984 to May 1989

Abbr	Cause (in DIL)	English Equivalent
SINF	Sin Información	No information on strike found in DIL, Informes Laborales
DESC	Desconocido	DIL mentions strike but not its causes, or describes causes ambiguously
ATRA	Pago Atrasado	Demand for overdue wages owed by employer
DESP	Despedidos	Layoffs (except PERS), fear of layoffs, failure to issue severance pay
COMP	Cumpliam. Contr.	Demand employer comply w/contract or that prev. cont. be respected
PERS	Persecución	Protest vs. persec. of union, refusal to recog. factory delegates, etc.
SEGU	Segur. del trabajo	Safety
PRIV	Privatización	Protest against government plans/efforts to privatize a state corp.
HORI	Horas Insuficientes	Not enough work
SALA	Salarios	Demand for higher wages
ESCA	Escalafón	Dem. for pay proport. w/other workers, job reclassif., promot. rules
VENT	Ventajas	Fringe benefits (medical insu. etc.) except retirement benefits (JUBI)
POLI	Política	Protest against government laws or policies
PARI	Paritarias	Demand for return to collective bargaining
COND	Condic. de trabajo	Protest vs. poor working cond., poor raw mater., high produc. speeds
JUBI	Jubilación	Retirement benefits
ABAR	Abarc. del contrato	Demand that new categ. of wrkrs (e.g. temps) be covered by contract
REPU	Repud. la gerencia	Repudiation of management
SOLI	Solidaridad	Job action to show support of another group of strikers
DEMA	Demarcación	Demarcation dispute between unions about job categ. each will repre.
PART	Participación	Demand for more participation in running of enterprise
RECO	Reconocimiento	Rcgnit. of union, vs. imposit. of trustees, halt embargo of union funds
TRAS	Traslados	Protest against company decision to move workers or workplace
OBSO	Obra Social	Demand for return of social security funds to union control
HORE	Horas Excesivas	Working day too long

Note: Most strikes which should have been coded "DESC" were coded "SINF" before March 1985

Source: Documentación e Información Laboral, Informes Laborales, Various Issues

\* Denominator is total number of total small strikes. \*\* Denominator is total number of big strikes.
